AGRI SCIENCE

# Field Trial Summary 2025

Demonstration results from farmers' fields

SAMPLE FORMAT — Replace the illustrative figures below with your verified trial data before publishing.

## Objective

To compare yield and quality outcomes of Nutrimo nutrition and protection schedules against farmers' usual practice under real field conditions.

## Method

- Paired plots: Nutrimo schedule vs. farmer practice, on the same farm.
- Locations spread across different agro-climatic zones.
- Observations: plant vigour, pest and disease incidence, yield and produce quality.

## Results (illustrative)

| Crop | Treatment | Farmer practice (q/acre) | Nutrimo schedule (q/acre) | Change |
|---|---|---|---|---|
| Tomato | WSF + Ca + bio-stimulant | [x] | [y] | [%] |
| Cotton | Balanced NPK + IPM | [x] | [y] | [%] |
| Paddy | Zn-EDTA + PSB | [x] | [y] | [%] |
| Wheat | SulphoPlus + micronutrients | [x] | [y] | [%] |
| Chilli | Seaweed + fungicide program | [x] | [y] | [%] |

## Key observations

- Record visual and measured differences in vigour, flowering and fruit set.
- Note pest and disease pressure and the number of sprays required.
- Summarise the benefit-to-cost ratio for each crop.
