Safe Pesticide Handling Guide

Protect yourself, your family and the environment

Before you spray

- Read the label and leaflet completely. Follow the dose, crop and waiting period.
- Check the sprayer for leaks and correct nozzles.
- Wear Personal Protective Equipment (PPE): gloves, mask or respirator, goggles, full-sleeve clothing, boots.

Mixing

- Mix outdoors, away from children, animals, food and water sources.
- Use a measuring cup — never use kitchen utensils.
- Do not stir with bare hands. Do not blow or suck blocked nozzles.

Spraying

- Spray in calm weather, in the early morning or late evening.
- Always spray with the wind behind you; never against the wind.
- Do not eat, drink, smoke or chew tobacco while spraying.
- Do not spray when bees are active on flowering crops.

After spraying

- Wash hands, face and body thoroughly with soap. Wash spray clothes separately.
- Observe the re-entry and pre-harvest intervals on the label.
- Triple-rinse empty containers, puncture them and dispose of them as per local rules. Never reuse them.

Storage

- Store in original containers with labels, locked and away from food, feed and children.
- Keep in a cool, dry, ventilated place out of direct sunlight.

First aid

- Skin contact: Remove contaminated clothing and wash skin with soap and plenty of water.

- Eye contact: Rinse with clean running water for at least 15 minutes.
- Inhalation: Move the person to fresh air and keep them calm.
- Swallowed: Do not induce vomiting unless the label says so.
- Always: Seek medical help immediately and show the product label to the doctor.
